June 7, 1977

Mr. Thomas A. Schneider  
Process Engineer - Solid Wire  
HOBART BROTHERS COMPANY  
Filler Metals Division  
Troy, Ohio 45373

Dear Mr. Schneider:

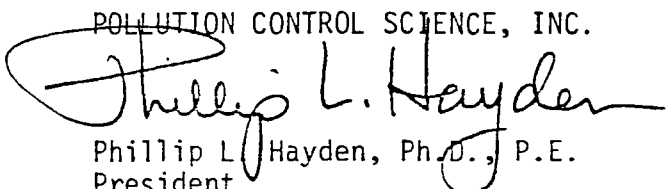

I am enclosing the results of our tests on the well water sampled from the Hobart House and the Lytle Road House. The results indicated that both wells have detectable amounts of heavy metals, e.g., copper, nickel, lead, zinc, etc. The copper and the zinc could possibly come from the plumbing in each house but there is no reasonable explanation for the nickel and lead, except that they are probably present originally in well water.

The only area of real concern is the lead content of the Lytle Road House. Our analysis indicate that lead is present at a level of 60 ug/l. Drinking water limits lead to 50 ug/l or less.

We are presently analyzing six water samples which were forwarded to us by Bob Lamb and should have a better feel for the overall problem once we have completed the analyses.

Sincerely,

POLLUTION CONTROL SCIENCE, INC.

Phillip L. Hayden, Ph.D., P.E.  
President
